Blogging 101: How to Write a Compelling Narrative
Strong community building was a favorite aspect of Training for fellows. Fellows commended the speakers, university setting and even the New Haven community for providing a welcoming space in which to connect with their fellowship class.

100% of survey respondents said that they feel a “strong” or “very strong” sense of community with other fellows following Training.

Together with our sister organization, Still Harbor, GHC has created an accompaniment program designed to provide emotional, spiritual, and mentor support for fellows particularly in their efforts to develop deeper awareness of self and others. During Training and throughout the fellowship year, the Global Health Corps Accompaniment Program provides fellows with the opportunity to engage in private dialogue with a trusted, neutral person, seek assistance in learning or practicing methods of self-care while engaged in service, and find help in working through relationships.

“The Still Harbor team plays an essential role in the development of each fellow. I firmly believe that without the instruction and guidance of Still Harbor, it would be impossible for the individuals at GHC to perform at such a high level. They provide an invaluable support system, and have taught me essential life skills which I will treasure for the rest of my life.”

Community Building

Strong community building was a favorite aspect of Training for fellows. Fellows commended the speakers, university setting and even the New Haven community for providing a welcoming space in which to connect with their fellowship class.
